

# REPLACE INDIRECT LABOR WITH RELIABLE **AGVs**

Automatic Guided Vehicles (AGVs) have come a long way in the past few decades since the 1977 Raymond Electote. Getting used to driver-less cars now is not much different than it was with driver-less vehicles in the manufacturing and distribution environments years ago. Today's AGVs are reliable and have proved themselves in industrial environments.

AGVs are much safer than maned forklifts and significantly more efficient. In using AGVs, clients have been shocked to learn how much indirect labor is required to support their processes. Much of it is masked by production workers doing indirect labor tasks just to get what they need when they need it. FPS has worked with AGVs as far back as 1977. We would like to take this experience to make you more profitable. Call us.
